

MP VITRAGE

THE GLASS
MONASTIC®

A MP Vitrage creation

MEETING THE MOST CHALLENGING REQUIREMENTS

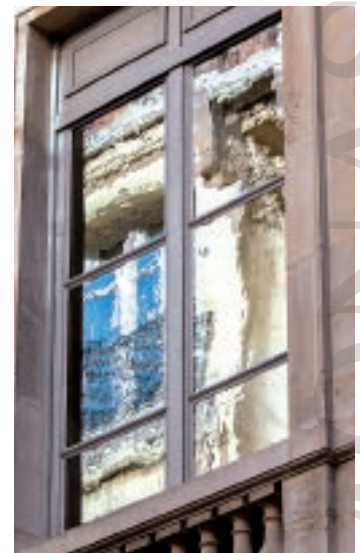

Our team designs, manufactures, and perfects, in its workshops, innovative products that can integrate into the most prestigious projects. The Monastic® glass, our latest creation, has been developed to meet the aesthetic demands of our customers. Our ambition: restore the look, the vibration, and the classic glass rendering, while adapting to your budget.

The Monastic® glass has many benefits. It helps:

- provide a rendering that is close to real hand-blown glass for more affordable budgets,
- regain the aesthetics of classic glass whose manufacturing has stopped,
- make large formats in different thicknesses (2, 3, and 4 mm).

The Monastic® glass perfectly meets architectural projects whose goal is to restore or maintain the luster of the facades of buildings from the 15th century to the beginning of the 20th century. The Monastic® glass is already validated and adopted for monuments filed and recorded by many head architects for national heritage and historical monuments.

The assembly possibilities offered by the Monastic® glass, as well as its thickness/performance ratio, allow to meet all requirements (thin double-glazing for example): thermal, acoustic, safety, UV blocking, solar control...

ALLIER RELIEF AESTHETICS AND COMFORT OF TRANSPARENCY

Playing subtly with the reflection of light, the distortion of the Monastic® glass maintains the rendering of the facades of ancient monuments and perfectly meets the requirements of the monuments curators. Transparent from the inside, it preserves the comfort of the users.

The Monastic® glass is an extra clear glass available in 2 finishes:

- the Monastic® whose rendering is close to hand-blown glass,
- the Grand Monastic®, which has a more important distortion, similar to cast glass.

Choose the reference adapted to your project from the table below.
